

Application Services: Software Development

Paradigm can provide application development services in a variety of architectures, technologies, and business environments. Our resources have the knowledge and experience to create mission-critical, industrial strength software applications that support your key business processes development.

- Paradigm has resources with experience in the creation of new software products and the customization of existing applications. We can provide knowledge of applications for numerous industries including government & public administration, healthcare, insurance, banking and finance, energy, utilities, supply chain, point-of-sale, and telecommunications.
- Paradigm delivers high quality software code through adherence to proven procedures in testing and quality assurance. We extensively use mature software development environments in many technologies, which enforces consistent code, consistent application look, feel, & behavior, robust error handling, and secure transaction management.
- Our application team works with application and network architects to ensure systems are built with the required performance, fault tolerance, security, availability, and reliability.
- Paradigm's software professionals possess skills that embrace the latest and most effective development technologies including .Net, Visual Basic, Java, ASP, XML/XSL, C#, C++, SQL Server, Oracle, Sybase, and many more.

Typical Deliverables from Software Development:

- Application Software Components
- Physical Database
- Converted legacy data
- Acceptance Test Cases
- Systems Integration Plan
